Damage Assessment Service

Boiler or Burner damages require experts on board. SAACKE provide these experts and superintendents with hands-on experience to get the situation settled and solved – fast and efficient!

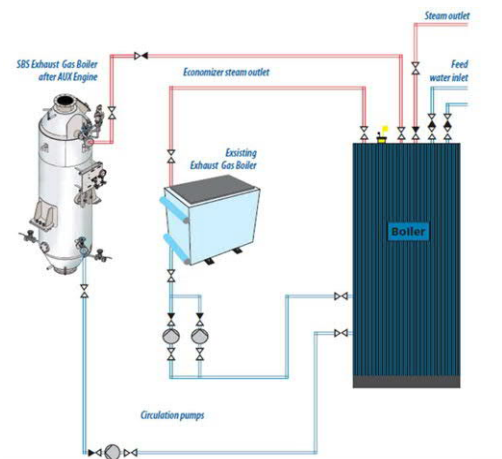

Cooperation

Our experienced supervisors and marine engineers are supported both by our engineering department and our cooperation partners, in order to be fully updated with the latest burner and control technologies. Besides our worldwide partners, we have great experience in Aalborg (KB, KBSD, KBO), Hamworthy and Volcano burner systems.

Design or Retrofit of Boiler & Burner Management System

For older boiler control system and based on obsolete key parts like PLCs, SBS has developed a modular system suited for most burners and boilers. The system can handle multiple boilers with multiple burners, and the technology is already installed on several large tankers.

EXXIE Fuel saving Programs incl. Down-Sizing and Modifications to meet your green goals

- Low load mode for aux boilers
- Aux EGE system
- Oxygen trim for burner control
- Power Management for boiler
- FD fans and pumps
- Electrical steam generators
